

Project Title: ConnectHub – A Student Networking
Developed By: Harsh Vishwakarma

1. Introduction

ConnectHub is a student-centric professional networking platform designed to connect individuals based on academic interests, research, and skill development. Unlike traditional platforms like LinkedIn that cater to working professionals and job seekers, ConnectHub is tailored for students to build their academic presence, collaborate on projects, and share learning resources.

2. Objectives

- To provide a digital platform for student networking
 - To allow sharing of resumes, project files, and research papers
 - To offer a portfolio-style profile page for every student
 - To implement secure login and authentication
 - To ensure media storage and scalability using modern cloud tools
-

3. Technology Stack

Layer	Technology
Frontend	Next.js (React Framework)
Backend	Node.js, Express.js
Database	MongoDB (Atlas)
Authentication	Clerk
Media Storage	Cloudinary

4. System Architecture

- **Frontend (Next.js):** Handles routing, rendering UI components, and interacting with backend APIs
- **Backend (Node.js + Express):** Provides RESTful API services for user data, posts, and uploads
- **Database (MongoDB Atlas):** Stores user profiles, posts, and metadata
- **Cloudinary Integration:** Handles uploads of profile pictures, resumes, research documents, etc.
- **Authentication (Clerk):** Manages secure user registration, login, and session management

Optional extensions planned for future: messaging module, groups, recommendations

5. Core Features

- **User Authentication:** Signup/login using Clerk, with secure session management
 - **Profile Management:** Users can add a bio, upload resumes, and list skills
 - **Post Sharing:** Upload and share projects, research papers, and academic updates
 - **Media Handling:** Documents and images are stored securely using Cloudinary
 - **Explore & Connect:** Students can view others' profiles and follow/connect
 - **Search:** Quick search to find students based on name or skills
-

6. Workflow

1. **User signs up via Clerk**
2. **User creates or edits profile**
3. **User shares posts or uploads documents**
4. **Other users can view shared content**

5. All uploads are stored in Cloudinary and managed via backend APIs

- Upload Interface

- Explore/Feed Page

• Like Button and Comments

8. Challenges Faced

- Clerk authentication setup and custom styling
- Cloudinary integration with Node.js
- File size limits during uploads
- Responsive design challenges on mobile screens
- Synchronizing frontend with backend during API changes

9. Future Improvements

- Implement messaging and real-time notifications
- Add filters and sorting in Explore section
- Enable resume parsing and portfolio scoring
- Introduce project collaboration rooms or groups
- Deploy mobile app version (React Native)
