

Project Name: ConnectHub – Student Networking

Developer: Harsh Vishwakarma

Requirement Elicitation Questionnaire

No.	Question	Purpose
1	Who are the primary users of the platform?	To identify target audience (students).
2	What core functionalities should be included?	Define scope: profile creation, post sharing, messaging, etc.
3	Should the platform support uploading of resumes and research papers?	Understand file upload requirements.
4	Do users need authentication? What kind?	Clarify auth method – Clerk used for this.
5	Should users be able to follow/connect with others?	Define networking features.

Coding Standards Template

Aspect	Standard
Variable Declaration	Use const for constants and let for reassignable variables. Avoid var.
Indentation	2 spaces per level.
Semicolons	Mandatory at the end of each statement.
Comments	Use // for inline, /* */ for block comments. Maintain code documentation.
Naming	Descriptive names for all functions and variables. Avoid abbreviations.
Linting	Use ESLint with Airbnb or Prettier config.

React (Next.js) Standards

Aspect	Standard
Component Structure	Functional components with hooks only.
File Naming	ComponentName.jsx or PageName.js
Folder Structure	Keep components, pages, services, utils, and styles separated.
Props & State	Validate props with PropTypes or TypeScript.
API Calls	Abstract into separate services file.

API Standards (Express.js)

Aspect	Standard
Route Naming	RESTful naming (e.g., /api/users/)
Error Handling	Use try...catch in async routes. Return consistent error messages.
Validation	Use middleware like express-validator for request data.
Status Codes	Use proper HTTP codes (200, 201, 400, 401, 500)
